## **ACKNOWLEDGEMENTS**

The author would like to thank the staff of the Children's Campaign for help in writing, revising, and producing this report, including Van Schoales, Alex Medler, Chris Watney, Barbara O'Brien, Amber Minogue, and Rob Sherow. Kevin Welner, Paul Teske, and Alan Gottlieb provided invaluable assistance during the review process.

## EXECUTIVE SUMMARY

Over 30 years ago, Robert Kennedy described the achievement gap between our country's advantaged and disadvantaged students "a stain on our national honor." In 2005, the achievement gap remains wide and is growing. In fact, almost 400,000 students in Colorado averaged below proficient on the most recent state CSAP tests, and many of these students represent traditionally disadvantaged groups.

This report investigates the achievement gap between affluent and poor students in Colorado. By tracking state test scores over the past decade, we find that the achievement gap has not closed in most grades and subject areas. In general, test scores have improved over time, and that's a positive sign for our educational system. However, academic gains of poor students have not kept pace with their more affluent counterparts.

The achievement gap is most dramatic in math, where only about half as many students in the poorest quarter of all schools meet the states proficiency standards, compared to students in the wealthiest quarter of schools. However, the gap remains large in reading and writing as well. Schools have been successful at moving poor students from Unsatisfactory to Partially Proficient. While this is a step in the right direction, schools have not been as successful in moving their students to the level of proficiency, an important benchmark for all students to reach, rich or poor.

To identify individual schools and districts that have been successful in closing the achievement gap, we calculated average increases in CSAP proficiency levels since 1997. The schools which improved the most vary widely. Some are affluent, some are poor, some began with high CSAP scores and some with low CSAP scores. Many schools from across the state have been successful, but our results suggest that many are not yet meeting the needs of their diverse student populations.

Closing the achievement gap will require a concerted effort among educators, policymakers, and communities. We offer the following recommendations to close the gap:

- 1. Continue to track the achievement gap on an annual basis.** Educators and researchers should continue to monitor the achievement gap in years to come, using high-quality, timely assessment linked to a unique statewide student identifier.
- 2. Encourage Data Transparency.** Data should be collected accurately and completely and should be regularly reported to schools, districts, communities, families, and students.
- 3. Focus resources and support on traditionally disadvantaged children.** Our schools serving disadvantaged children are in particular need of help and support, including strong leadership, qualified teachers, instructional support, and financial resources.
- 4. Support schools and strategies that are successful.** We know that certain schools and approaches can be enormously successful in raising achievement for disadvantaged children. Successful schools and programs should be evaluated and replicated.
- 5. Maintain high expectations for all children.** Moving children from Unsatisfactory to Partially Proficient is not enough. The Partially Proficient standard our state has decided is adequate for No Child Left Behind reporting requirements is not high enough for the twenty-first century. In order to be successful in future schooling, work, and citizenship, *all* students need to reach full proficiency in all of the core academic areas.

People from all points along the political spectrum have recognized the importance of raising achievement for all students, no matter their economic background. We hope these findings can serve as a starting point for discussions about equal opportunity and accountability in our state.

## INTRODUCTION

In the 1960s, Robert Kennedy described the disparity in academic achievement between our country's advantaged and disadvantaged students a "stain on our national honor." More than 35 years later, the "achievement gap" remains one of our educational system's most significant challenges.

Equality of opportunity is a fundamental shared value of the American public education system. Americans of all backgrounds and political persuasions believe that equal access to a quality education is a fundamental right for all students, no matter their family income or ethnic background. High achievement for all students is key to a prosperous, safe, and just society. But in spite of our hopes for a strong and fair educational system, studies conducted nationwide and in Colorado have shown that poor students and members of ethnic minorities lag far behind their peers in most measures of academic achievement<sup>1</sup>. In all, almost 400,000 students in Colorado averaged below proficient on the most recent state CSAP tests, representing almost half of the state's student population.

People in Colorado and around the country are paying increased attention to closing the achievement gap. At the national level, accountability reforms such as No Child Left Behind's Adequate Yearly Progress (AYP) requirements represent an attempt to require schools to educate *all* students. Colorado policymakers have begun to focus attention on the achievement gap as well. In 2001, for example, a bipartisan commission led by Governor Bill Owens and Attorney General Ken Salazar took on the task of closing the gap in our state. The Colorado Closing the Achievement Gap commission calls the fate of our poorest and most vulnerable children a "deplorable" threat that threatens every citizen and endangers the future of our society.<sup>2</sup>

This report examines the state of the achievement gap in Colorado and asks the following questions about the educational state of our state:

- Has the achievement gap between wealthy and poor schools closed over time?
- In which grades and content areas is the gap most severe?
- Which districts and schools are doing the best job of increasing achievement for poor students?

By better understanding which students, schools, and districts are improving and which are being left behind, we can better address one of the most important tasks facing our educational system today: ensuring that *all* children, regardless of race, class, or income, have the opportunity to succeed in our public schools.

## WHAT IS THE ACHIEVEMENT GAP?

The achievement gap can actually refer to a set of gaps, including gaps between minority students — especially African-American, Latino, and Native American students, and their white and Asian-American counterparts — and gaps between affluent and poor students.<sup>3</sup> This report focuses on the gap between affluent and poor students, though similar analyses performed on gaps between white and minority students yielded similar findings.

Closing the achievement gap is important. We know that a quality high school education is crucial to future success in careers, community, and life. We also know that a diverse, well-educated workforce is key to a thriving society. Our schools are charged with providing our young people with the skills necessary to participate in work and society. If our schools are failing to provide such an education to *all* students, they are falling short in their essential missions.

Evidence at the national level suggests that's exactly what is happening. Research from the National Assessment of Educational Progress (NAEP), the "nation's report card," shows that by the end of fourth grade, African-American, Latino, and poor students are two years behind other students. By eighth grade they have slipped three years behind, and by the time they reach twelfth grade, they are about four years behind.<sup>4</sup> Of those who do finish high school, far fewer Latino and African American high school graduates go on to attend college.<sup>5</sup> A RAND study using data from the three national longitudinal studies and the NAEP found that achievement gaps remained wide between the late 1970s and the early 1990s, although nationally Black and Latino students made significant progress in closing the test score gap in both reading and math.<sup>6</sup>

Evidence from Colorado suggests the state has not fared any better. For example, The Colorado Closing the Achievement Gap Commission found that twice as many white middle and high school students score proficient or above than African American and Latino students on most reading, writing, and math tests. The problem extends to graduation as well; the Commission found gaps of more than 10 percent between white students and African American and Latino students in graduation rates,<sup>7</sup> while a 2004 Colorado Children's Campaign report found differences between white and Native American students are more than 18 percent for graduation.<sup>8</sup>

By examining how Colorado's achievement gap has changed over time, the state can assess successes and areas of concern in our educational system and take positive steps toward addressing the problem.

## **THE ACHIEVEMENT GAP IN COLORADO: STATEWIDE TRENDS**

Is the achievement gap between Colorado's advantaged and disadvantaged students closing? To answer this question, we used results from the Colorado Student Assessment Program (CSAP) to measure trends in academic achievement over the past nine years.

Our indicator of academic success is the state's best measure of student achievement: the percentage of students scoring proficient or advanced on the CSAP test. This standard is more appropriate than the weaker standard of partial proficiency, which is the standard Colorado has determined is acceptable to meet national accountability requirements, even though this standard is far below actual grade-level expectations.

To compare how well schools serving different populations are meeting the needs of their students, we assigned each Colorado public school to one of four groups based on the percentage of its students living in poverty.<sup>9</sup> We compared achievement trends for each group of schools over time. (More detail about how school groups were computed appears in Sidebar 1).

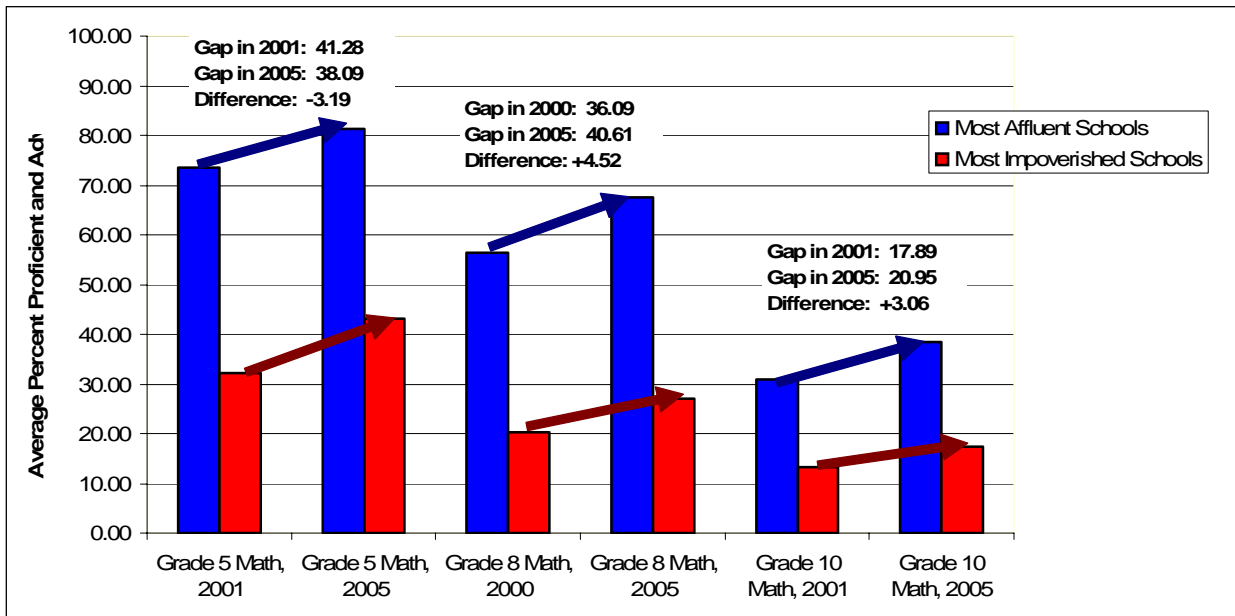

The results of this analysis are striking and disturbing. Across Colorado, in reading, writing, and math, in elementary, middle, and high school, economically disadvantaged students are falling further behind affluent students on Colorado's most important measure of academic success. At the same time, these analyses provide some hope, identifying individual schools and districts which have beaten the odds.

# THE ACHIEVEMENT GAP IS GROWING IN MOST GRADES AND SUBJECTS

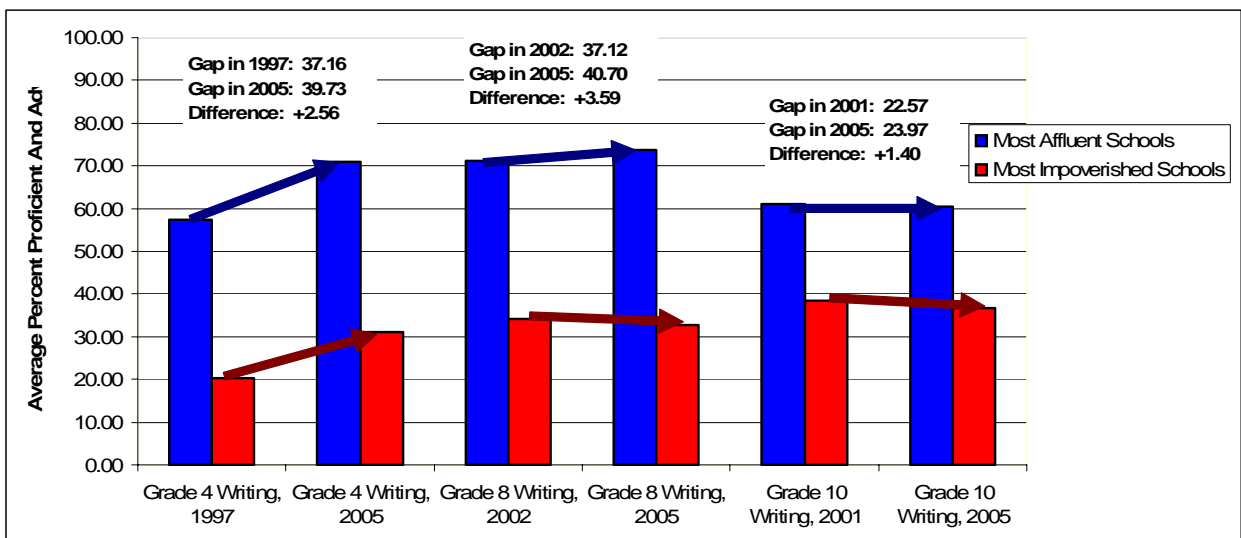

Scores for affluent and poor schools have increased over the past several years, a sign that our educational system is headed in a positive direction. Our public schools deserve credit for the progress they have already made. However, the achievement gap between affluent and poor schools continues to grow, and our public school system is most successful when all schools can show academic improvement.

Figures 1-3 present the percentage of students scoring proficient or above on the CSAP for affluent and poor schools over time in reading, writing, and math. In each subject, the achievement gap is displayed for the first year the test was administered and for 2005. In most cases, the gap has widened since the test was initiated.

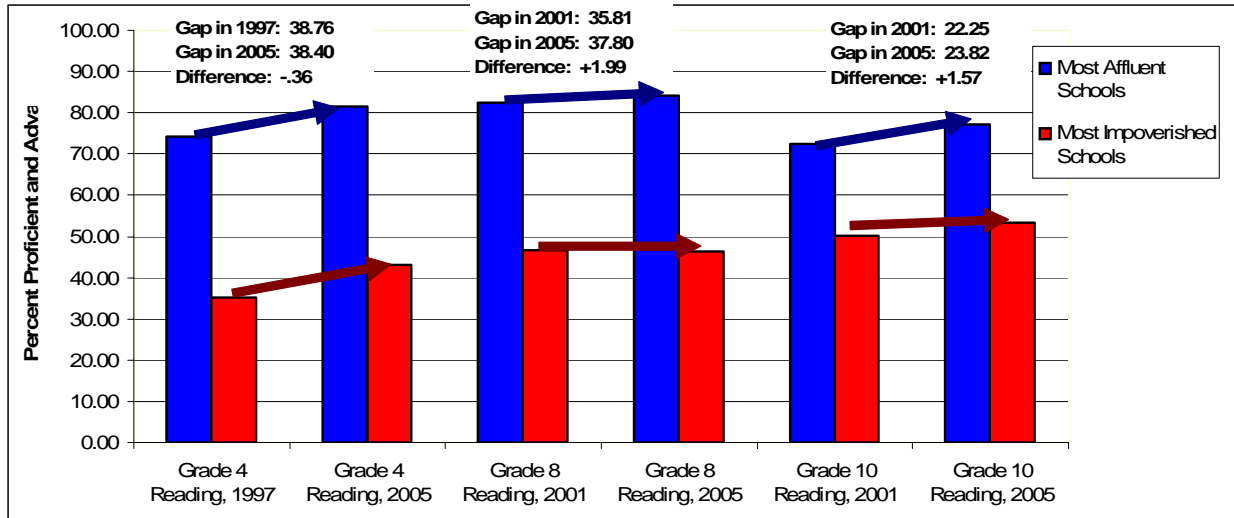

**Figure 1. Math CSAP Scores For Affluent And Poor Schools In Grades 5, 8, and 10**

**Figure 2. Writing CSAP Scores For Affluent And Poor Schools In Grades 4, 8, and 10**

**Figure 3. Reading CSAP Scores For Affluent And Poor Schools In Grades 4, 8, and 10**

## HOW SCHOOLS WERE ASSIGNED TO GROUPS BASED ON POVERTY STATUS

### Data Used

This report uses results from CSAP tests in 4<sup>th</sup>, 5<sup>th</sup>, 8<sup>th</sup>, and 10<sup>th</sup> grades to provide a representative sample of scores at the elementary, middle, and high school levels. In all, nine assessments were used: fourth grade reading and writing; fifth grade math; eighth grade reading, math, and writing; and tenth grade reading, math, and writing.

### Computing School Quartiles

All public schools in the state were assigned to one of four equal groups based on that school's percentage of students eligible for free or reduced lunch (FRL) in 2003. FRL is a commonly used proxy indicating student poverty, though it is imperfect. For example, the use of FRL to indicate poverty in high schools may underrepresent the school's true poverty level, and charter schools are likely to underreport FRL levels. However, such effects are not likely to introduce significant systematic error that would favor particular schools over other schools. FRL remains the best indicator of student poverty available to us.

To create school groups, schools were first separated into one of three categories based on their school level (elementary, middle, or high). Within each level, all schools in the state were sorted from lowest to highest based on their FRL percentage. Beginning at the top of the list, schools were added to Quartile I until the total number of students in that group equaled  $\frac{1}{4}$  of the total students in the state at that level. The process was continued for the other three groups. The end result was four groups of schools, each with the same number of students, for each school level.

## **SIDE BAR I: WHAT AFFECTS STUDENT ACHIEVEMENT?**

We know that a host of factors contribute to student achievement. In his landmark 1966 report, James Coleman stressed the importance of interdependence among inequalities in children's home, neighborhood, and peer environments and their school experiences<sup>10</sup>. A recent study by researchers at the RAND Corporation found that family variables account for 75 percent of the variance in state achievement scores.

State and national policies increasingly focus on the school as the key unit of analysis and improvement. This focus reflects extensive research highlighting the importance of schools in improving achievement. For example, the RAND researchers concluded that systemic reform initiatives across states are the most likely explanation for score differences across states. Higher per-pupil expenditures, lower pupil-teacher ratio in lower grades, higher reported adequacy of teacher resources, higher levels of participation in public pre-K, and lower teacher turnover were related to positive effects on achievement, explaining up to one-half of nonfamily differences in achievement across states.<sup>11</sup> An analysis of Tennessee tests scores by William Sanders found that low-achieving students gained 14 points each year on the state test when taught by the least effective teachers, but gained more than 53 points when taught by the most effective teachers.<sup>12</sup> And economist Erik Hanushek's research finds that the difference in annual achievement growth between having a good and having a bad teacher can be more than one grade level equivalent in test performance.<sup>13</sup>

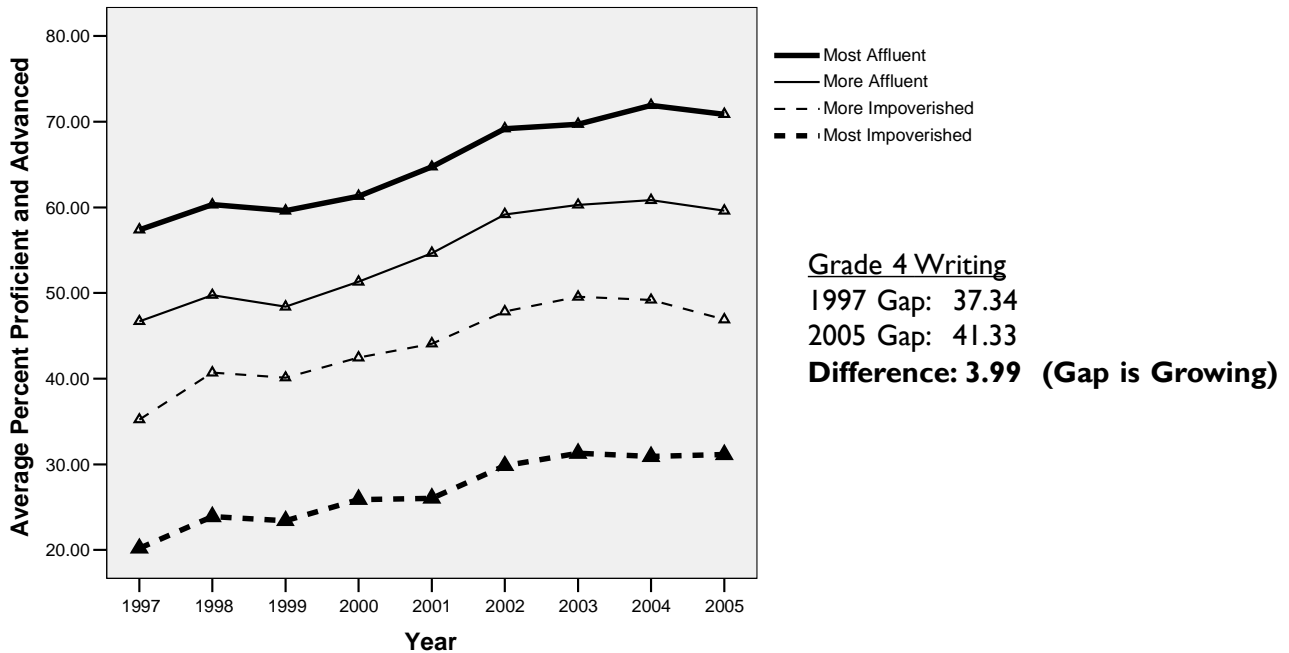

Other research has identified a wide variety of school-level reforms which can be effective at closing the achievement gap, including strengthened curriculum and instruction for disadvantaged children, equitable distribution of qualified teachers, and smaller class sizes.<sup>14</sup> In sum, while social and economic factors are important, what goes on in schools and classrooms matters too.

## **THE GAP IN ELEMENTARY SCHOOL**

In elementary schools the achievement gap is growing in reading and writing and has shrunk in math. Average test scores have improved over time in all subjects, a positive sign that many of Colorado's schools are improving. However, the achievement gap is growing because the highest poverty schools have not gained at the same rate as wealthier schools. For example, consider the achievement gap in 4<sup>th</sup> grade writing, presented below. In 1997, the wealthiest schools averaged 57.1 percent proficient or above, while the poorest schools averaged 19.8 percent proficient or above: a huge gap of 37.3 percent. But the gap grew even wider by 2005. This year, the wealthiest schools averaged 71.7 percent proficient or above while the poorer schools averaged 30.4 percent proficient or above, a gap of 41.3 percent.

There are some bright spots in elementary test scores, particularly in reductions in Unsatisfactory scores (see Figure 7), and in fifth grade math the achievement gap has closed slightly over time. However, some score increases may have been inevitable simply because initial scores for poor students were so low.

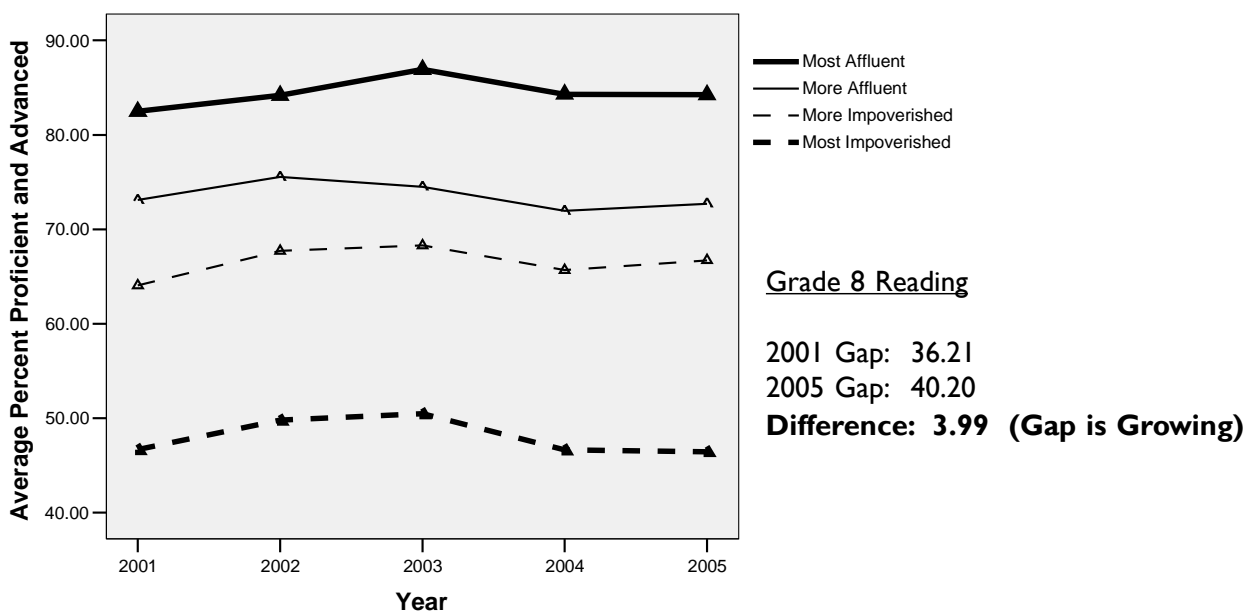

**Figure 4. Mean Grade 4 Writing Scores for Affluent and Disadvantaged Schools, 1997-2004.**

## THE GAP IN MIDDLE SCHOOL

In 8<sup>th</sup> grade, the achievement gap has increased considerably in reading, writing, and math. For example, figure 2 shows that average eighth grade rates of proficiency and above for schools in poverty were 44.2 percent in 2001 but fell to 43.2 percent in 2005. By 2005, almost twice as many students in wealthier schools scored proficient or above as did students in the least affluent schools.

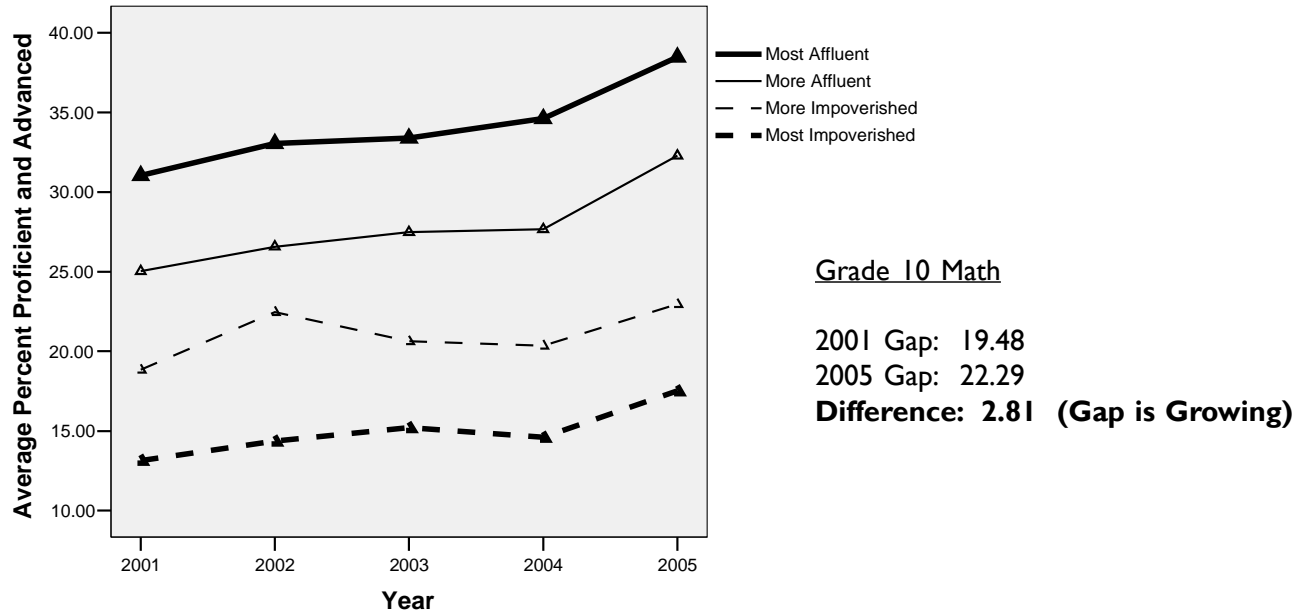

**Figure 5. Mean Grade 8 Reading Scores for Affluent and Disadvantaged Schools, 2001-2004.**

## THE GAP IN HIGH SCHOOL

By 10th grade, scores among our wealthiest and poorest students remain far apart in all subjects. However, there was some improvement among the poorest schools in all subjects in 2005. For example, 10th grade math scores, depicted in Figure 3, increased markedly between 2001 and 2005. But overall, poor students continue to lag further behind, and in spite of some gains, less than 18 percent of students in the poorest schools scored proficient on the 10<sup>th</sup> grade Math CSAP in 2005. That means that fewer than 1 in 5 students in poor schools have mastered the math skills expected of them in tenth grade.

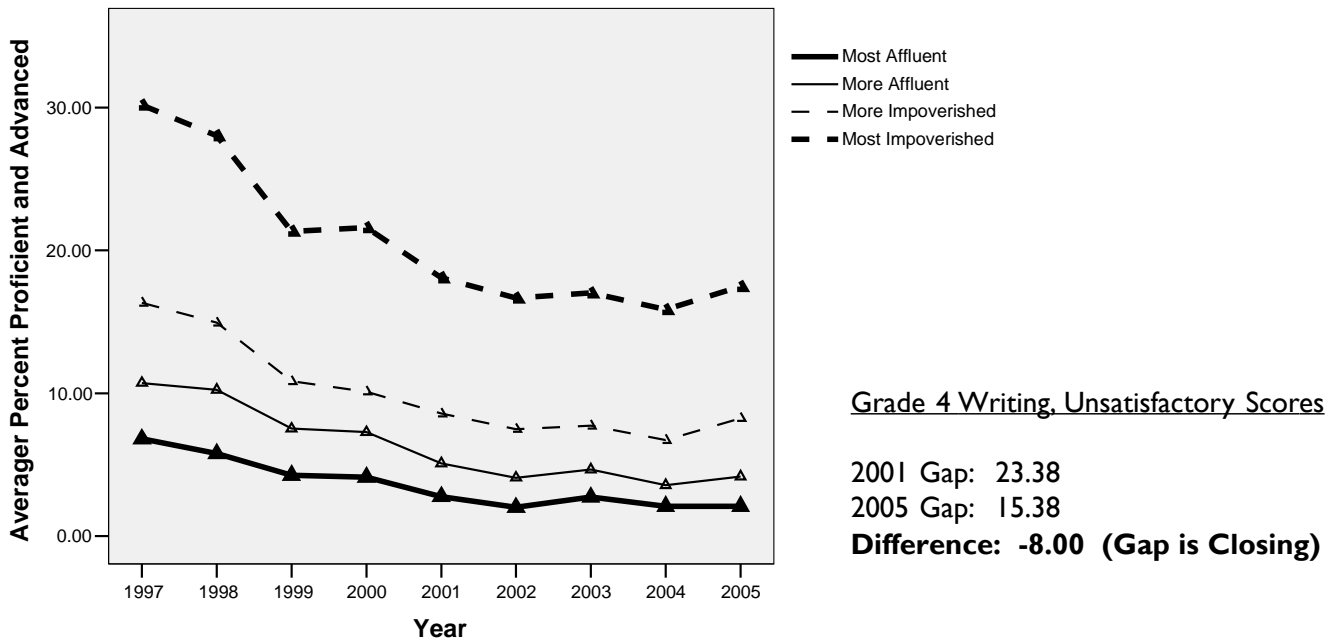

**Figure 6. Mean Grade 10 Math Scores for Affluent and Disadvantaged Schools, 2001-2004.**

## Reductions in Unsatisfactory Scores:A First Step

Although poor students lag far behind affluent students in reaching proficiency, our data suggest that some first steps have been taken which are helping disadvantaged students improve their performance. In the elementary grades, for example, many high-poverty schools have been successful in reducing unsatisfactory scores. For example, Figure 4 demonstrates that fourth-quartile schools have shown significant progress in reducing the percentage of their students scoring Unsatisfactory scores, although most of these improvements occurred between 1997 and 2000. One explanation for decreased levels of Unsatisfactory students may be that high schools are making efforts to test students who previously were not tested, increasing the proportion of students at the partially proficient or higher levels. Whatever the explanation for decreased Unsatisfactory levels, an important next step for these schools would be to bring all students to the level of proficiency.

**Figure 7. Mean Percentage Scoring Unsatisfactory in Grade 4 Writing for Affluent and Disadvantaged Schools, 1997-2004.**

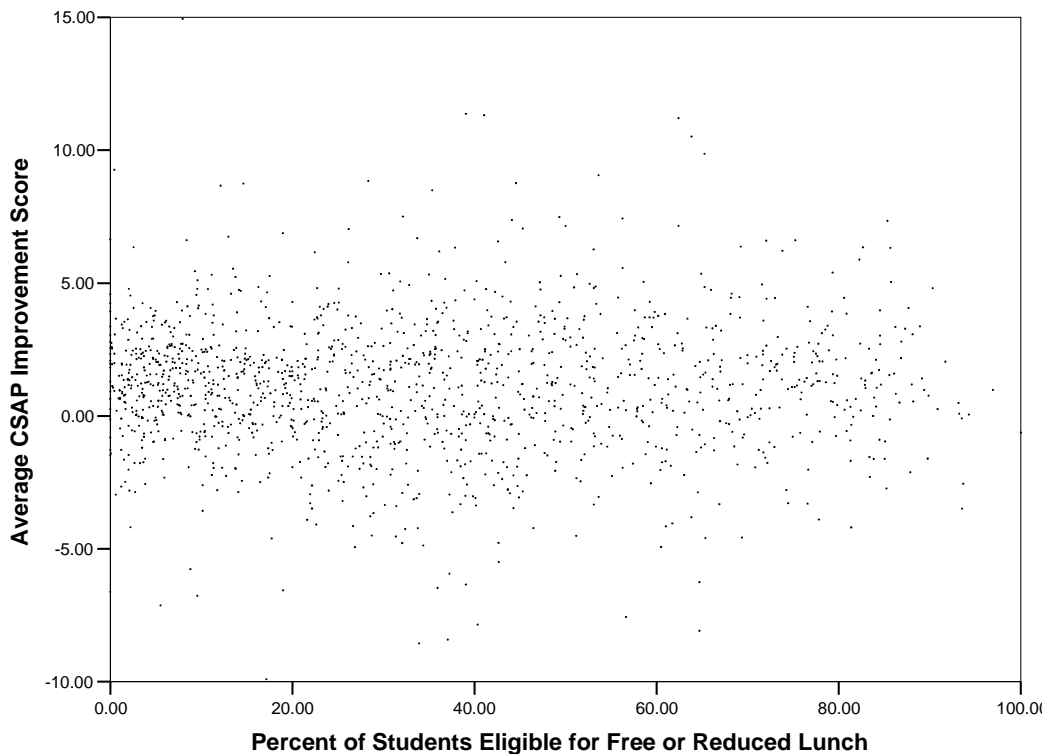

## SCHOOL AND DISTRICT SUCCESS IN CLOSING THE ACHIEVEMENT GAP

Which Colorado districts have been most successful in improving achievement for their high-poverty students? Which Colorado schools serving poor students are doing the best? To answer these questions, we investigated how CSAP scores have changed over time for both schools serving affluent and schools serving poor students.

To measure changes in achievement for schools and districts, we computed an average annualized improvement (AAI) score for each school. (A complete explanation of how AAI scores were computed appears in Sidebar 2). The AAI score represents the average annual increase in a school's percentage of proficient and advanced students across grades and subject areas. It captures the extent to which each public school in the state has raised its students' test scores to the level of proficiency. This measure, like any measure of school quality, is imperfect. For example, a school could show gains or decreases in test scores merely because their student population changed over time.<sup>15</sup> However, our improvement scores still represent an improvement over existing accountability practice, which typically use only a school's current score, not its change in score over time. Future analysis could take advantage of a student-level identifier that would track individual students from kindergarten through college. However, such data are not yet available in Colorado,.

Interestingly, we found no relationship between average improvement scores and school poverty status, indicating that schools serving rich and poor students were equally likely to show gains. Figure 8 shows the relationship between school poverty status and average improvement scores.

**Figure 8. School Poverty Status and Average Improvement Scores**

As with the statewide analyses, the focus is on proficiency as the standard of student success. Other measures could also be used to measure achievement, including reduction in a school's percentage of Unsatisfactory students. This goal may be of particular importance to schools serving extremely low-scoring students. However, merely promoting students to the partially proficient level, though it is an important first step, is an inadequate solution to closing the achievement gap. Proficiency is the standard expected of *all* of our students, rich or poor.

## Sidebar 2: Computation of Average Annual Improvement (AAI) Score

To compute the AAI score, we began with the percentage of proficient and advanced students in each public school in Colorado in writing and reading in 4<sup>th</sup>, 8<sup>th</sup>, and 10<sup>th</sup> grade, and in math in 5<sup>th</sup>, 8<sup>th</sup>, and 10<sup>th</sup> grade. The following procedure describes the steps used to compute the AAI score.

- First, an annualized improvement score (AIS) was computed separately for whichever of these nine assessments that were administered at each school. To compute the AIS, a gain score was calculated by subtracting an initial score (the average percentage of students scoring proficient and advanced in the two earliest years for which test data were available) from a current score ( the average percent proficient and advanced for 2004 and 2005).
- Next, this gain score was divided by the number of years between the initial score and the current score. For example, if a school gained ten points over a five year period in 4<sup>th</sup> grade math, the AIS for 4<sup>th</sup> grade math would be  $10 \div 5$ , or 2. Because schools need several years to implement programs and show gains, scores were only computed if a school had at least three years of data available.
- The procedure described above typically yielded two to three annualized improvement scores per school, depending on the school's grade level. For example, an elementary school serving grades 1-4 would have 4<sup>th</sup> grade reading and writing scores, while a high school would have 10<sup>th</sup> grade reading, writing, and math scores. The average annualized improvement (AAI) score was computed by averaging all of a school's annualized improvement scores.

## Which Districts Are Improving Achievement For Poor Students?

In order to determine which districts were most effective at raising scores for poor students, we tracked CSAP score increases for the poorest quarter of public schools in our state. For each district, we calculated how much CSAP scores had increased in these high-poverty schools (Refer to Sidebar 1 for computation of poverty quartiles).

We limited our district analysis to the 47 districts with a student enrollment greater than 2,000. Smaller districts are likely to have significant overlap between school-level and district-level administration and policies, making it difficult to distinguish the effects of schools and their districts. Together, the largest districts serve more than 690,000 students. Of these, 29 districts had at least one school in the poorest quarter of all schools. Table 1 presents the average AAI score for high poverty schools in each of these 29 districts. A complete list of average score increases by district appears in Appendix D.

**Table 1. Average Score Increases for Poor Schools, by District**

## Which Schools Are Improving Achievement for Poor Students?

Many schools across the state have been successful in raising test scores for their poorest students, while many have not.

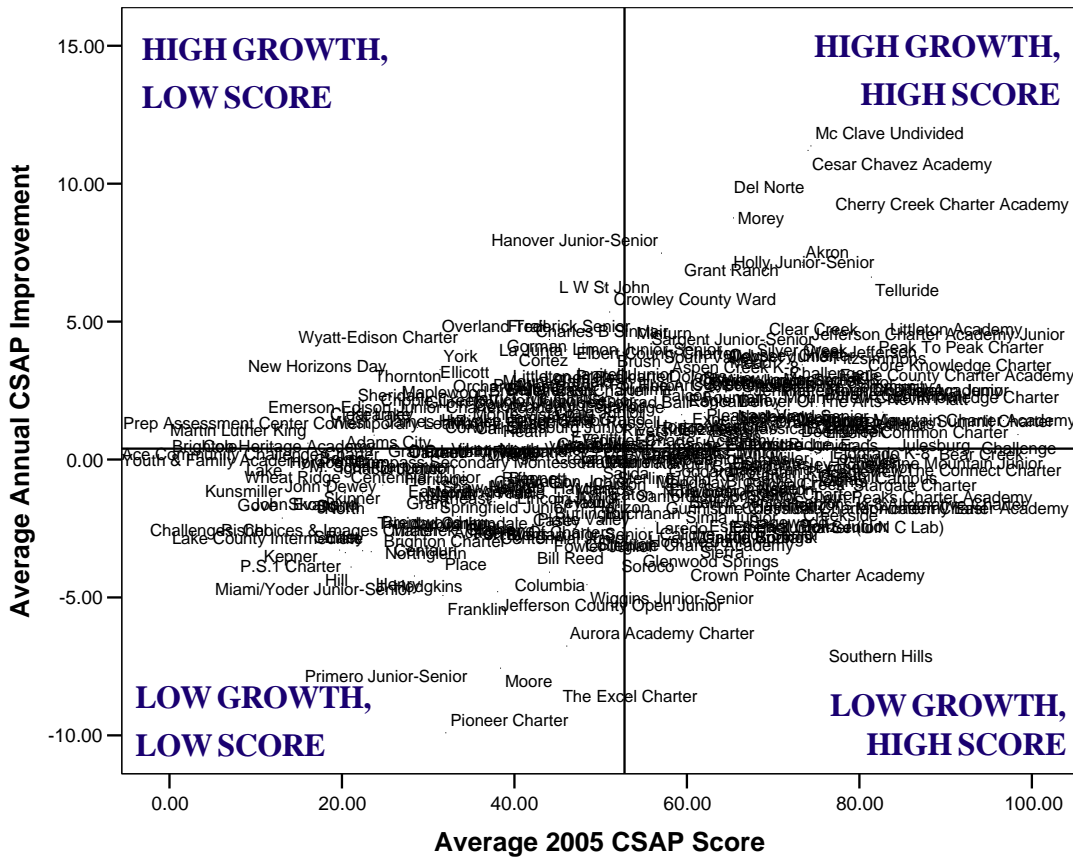

Figures 9 - 11 present average score increases and 2005 CSAP scores for elementary, middle, and high schools. This graphic display is intended to give an overall sense of the wide distribution of Colorado's public schools. Those schools toward the right of the graph have higher current levels of proficiency, while those toward the top of the graph have shown the greatest improvements. Schools in the top right quadrant of the graph, therefore, have both high scores and high growth.

The correlation between current test scores and average improvement scores was about .3, indicating a relatively small relationship between these two measures. On the whole, schools across the spectrum have made impressive gains, and future gains should be expected for all schools, not just those with low proficiency levels. Of course, schools which begin with very high levels of proficiency have limited room to grow, and their improvement scores should be interpreted accordingly.

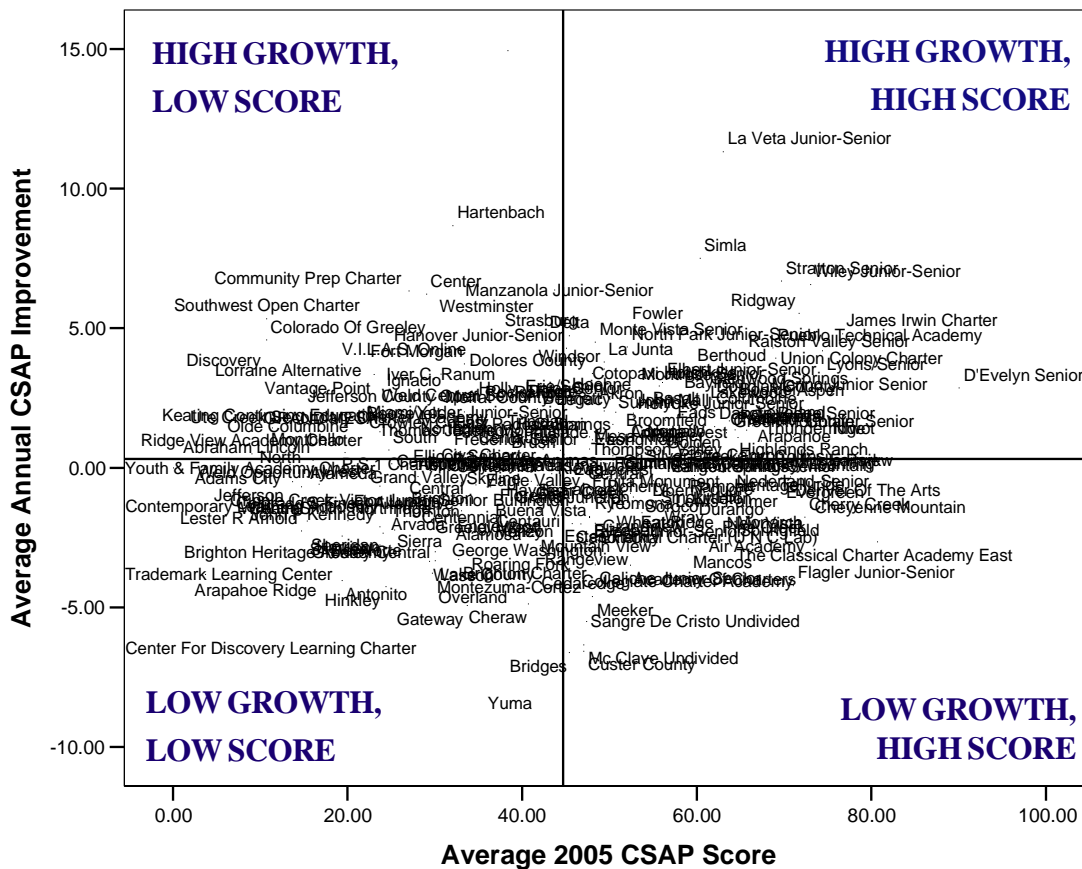

**Figure 9. 2005 CSAP Scores and Improvement Scores for Elementary Schools<sup>16</sup>**

**Figure 10. 2005 CSAP Scores and Improvement Scores for Middle Schools**

**Figure 11. 2005 Average CSAP Scores And Improvement Scores for High Schools**

While Colorado faces significant challenges in educating all of its young people, many excellent schools serve as examples of success in educating economically disadvantaged children. Across the state, schools with a huge diversity of economic, geographic, and demographic characteristics are succeeding. In fact, we found virtually no correlation between a school's economic status and its CSAP score increases. This important finding contradicts the old but firmly-held notion that poor schools cannot be academically successful. Rather, all schools – both those serving disadvantaged students and those serving affluent students – can be expected to raise the achievement of their students.

In this section, we highlight the high-poverty schools with the highest CSAP score improvements at the elementary, middle, and high school level.<sup>17</sup> (Complete lists of score increases for elementary, middle, and high schools appear in Appendices A – C.) The tables below presents the top 20 percent of schools in terms of CSAP improvement in each of elementary, middle, and high school.

Note that the information presented in these charts and in the appendices should be used as a starting point for discussions about achievement in individual schools. It is important to reiterate that because a school's student membership can change over years, score increases or decreases may be due to changes in student populations over time for some schools, in addition to (or instead of) changes in the academic quality of the schools. A complete picture of school success should include multiple measures, including CSAP scores, retention rates, graduation rates, success in college and careers, and other indicators. The data presented here should be considered as one of many pieces of evidence of school success.

## Effectiveness of Charter Schools

Charter schools have been suggested as one possible avenue to raise achievement of students who typically get stuck in low-performing schools. Charter supporters claim that by allowing parents and students to choose a particular cohesive instructional philosophy, their schools can better address the needs of disadvantaged children.

How well are charters serving Colorado's children? Table 6 presents average CSAP increases for charters and non-charters. Effectiveness of charters varies widely depending on income quartile. For example, in the highest and lowest quartiles, charters' test scores improved significantly more than their non-charter counterparts. On the other hand, charters in the middle of the spectrum performed less well than non-charters.

**Table 5. Average CSAP Score Increases for Charter Schools and Non-Charter Schools in Affluent and Impoverished Schools.**

## CONCLUSION AND RECOMMENDATIONS

### THE GAP IS WIDE AND GROWING

Overall, Colorado's standardized test scores have improved since the CSAP test was first instituted in 1997. In spite of these gains, the disparity between wealthy and poor students is growing wider each year. The achievement gap is unacceptably wide in all three subjects we analyzed – reading, writing, and math. The problem seems to be most severe in the middle grades, where poor children are falling further and further behind in all subjects.

Our results suggest that schools serving disadvantaged children may not be placing enough emphasis on moving all children to proficiency. Instead, they may be focusing on moving students out of the Unsatisfactory category. Research suggests that schools tend to focus resources on “bubble children” – those just under proficiency cutoffs – to meet accountability regulations<sup>18</sup>. Because Colorado's high-stakes accountability reforms place a particular emphasis on moving kids from Unsatisfactory to Partially Proficient, schools may be ignoring the importance of moving all children to Proficiency or higher. While any improvements in CSAP scores are laudable, many schools are failing to meet the important target of proficiency for their disadvantaged students.

Our findings also show that though the achievement gap is growing overall, many Colorado schools and districts have closed the gap to some extent. According to our analysis, successful schools may initially fall anywhere along the achievement spectrum, and they serve both affluent and poor students. We have identified dozens of schools that have been successful in raising scores for poor students.

### What Can We Do?

Successful schools need adequate resources and qualified teachers. But a 2004 Education Trust report found that the majority of states had a funding gap for their most vulnerable students.<sup>19</sup> In fact, the nationwide disparity between high-poverty and low-poverty districts was \$1,348 per student. In Colorado, per-student funding in the lowest poverty districts was about \$402 per student greater than in high poverty districts. All too often, there are profound differences in academic content and classroom experiences when poor and minority students are tracked into less challenging classroom environments.

There are great schools at work throughout our state. Many are identified here. We can learn from existing successes, replicating successful school models and programs across our state and throughout the country.

Challenging curricula and high standards are a particularly important ingredient in the recipe for academic success. Experts have found that high performing schools feature high-level courses, qualified teachers, flexible teaching styles, and extra tutorial support.<sup>20</sup> However, our results suggest that schools have had relatively little success in moving our children to high levels of performance. Addressing this problem will require a concerted effort to ensure that all students receive rigorous, high quality instruction.

Improved accountability structures have helped spotlight some glaring problems with our educational system. These include statewide student-level data systems, accurate and public means of measuring and publicizing school quality indicators, and goal-setting for students, teachers, schools, districts, and states. Continued development of high-quality data and accountability mechanisms can help ensure that attention is focused on this important issue, and that the information we have is current, accurate, and complete.

Finally, research has shown that a wide range of factors contribute to children’s academic success, including poverty, racism, neighborhood influences, school structure, instructional practices, teacher expectations, and political will.<sup>21</sup> Improved socioeconomic conditions such as parents’ occupational status, educational attainment, and income, as well as increased enrollments of black and Latino students in rigorous courses, have been shown to correspond to a narrowing of the achievement gap.<sup>22</sup> Coherence between educational strategies and policies can help improve the conditions which contribute to the achievement gap.

## **Five Recommendations for Closing the Achievement Gap**

**1. Continue to track the achievement gap on an annual basis.** Educators and researchers should continue to monitor the achievement gap in years to come. Annual reporting on the achievement gap by gender, age, ethnicity, income, and other student groupings will focus attention on the problem and can help us understand what interventions are most successful. High-quality, timely assessment, including school and classroom-level data, is crucial to this effort, as are advanced data systems using unique student identifiers to track students across teachers, schools, and years.

**2. Encourage Data Transparency.** Data should be collected accurately and completely and should be regularly reported to schools, districts, communities, families, and students. Data should be reported in a way that various audiences can understand, and it should be used in ways that support student growth.

**3. Focus resources and support on traditionally disadvantaged children.** Our schools serving disadvantaged children are in particular need of help and support. This support might come in terms of strong leadership, qualified teachers, instructional support, and financial resources. At the same time, schools which are failing to provide adequate instruction within a reasonable time frame should be restructured or replaced by proven research-based school designs.

**4. Support schools and strategies that are successful.** We know that certain schools and approaches can be enormously successful in raising achievement for disadvantaged children. Successful schools and programs should be evaluated and replicated. For example, the Fountain, St. Vrain, and Pueblo School Districts – as well as many other districts throughout the state – are clearly making significant progress in closing some gaps. Many of the schools listed in this report are employing strategies that have led to achievement growth over time. More public and private resources need to be invested to help others understand what works and what does not, while developing strategies for replicating successful schools and programs.

**5. Maintain high expectations for all children.** Moving children from Unsatisfactory to Partially Proficient is not enough. The Partially Proficient standard our state has decided is adequate for No Child Left Behind reporting requirements is not high enough for the twenty-first century. In order to be successful in future schooling, work, and citizenship, *all* students need to reach full proficiency in all of the core academic areas. Proven strategies, including implementation of rigorous curricula and expectations of high standards combined with individualized support, can help close the gap.

People from all points along the political spectrum have recognized the importance of raising achievement for all students, no matter their economic background. We hope these findings can serve as a starting point for discussions about equal opportunity and accountability in our state.

## APPENDIX A. CSAP SCORE INCREASES FOR ALL ELEMENTARY SCHOOLS

| School                                  | District               | Average Annual Improvement Score | 2005 Average Percent Proficient | Percent Free and Reduced Lunch |

## END NOTES

<sup>1</sup> For example, results from the national NAEP test (available at <http://nces.ed.gov/nationsreportcard>) consistently show an achievement gap between white and minority students. See also Christopher Jencks and Meredith Phillips, *The Black White Test Score Gap*, Brookings Institution, 1998; and Jennifer Sharp-Silverstein, Andrew J. Hartman, Angela Frye, and Rich Jones, *Understanding Colorado's Achievement Gap*. Bell Policy Center, 2005,

<sup>7</sup> Colorado Closing the Achievement Gap Interim Report, November 1, 2004. Accessed online at [http://www.cde.state.co.us/cdecare/clg\\_download/Interim\\_Final\\_CTAG\\_Report.pdf](http://www.cde.state.co.us/cdecare/clg_download/Interim_Final_CTAG_Report.pdf).

<sup>8</sup> Colorado Children's Campaign, *The Wager Of A Lifetime*. Accessed online at <http://www.coloradosmallschools.org>.

<sup>9</sup> Each school's poverty status was estimated based on the percentage of students eligible for free or reduced lunch (FRL). The achievement gap can also be conceptualized in terms of disparities between white and minority students. A separate achievement gap analysis based on ethnicity status yielded very similar results to the analysis based on income, and is not presented here.

<sup>14</sup> Ronald Ferguson, "Can Schools Narrow the Black-White Test Score Gap?" In *The Black White Test Score Gap*, Brookings, 1998.

<sup>15</sup> See also Robert Linn and Carolyn Haug, *Stability of School Building Scores and Gains*, Center for the Study of Evaluation (accessed online at <http://www.cse.ucla.edu/Reports/TR561.PDF>) for further discussion of cautions in interpreting year-to-year school gain scores).

<sup>16</sup> Each school is plotted based on two scores: its 2005 CSAP score and its CSAP improvement score. For example, Brush Creek school has an average 2005 CSAP score of 71 percent proficient or advanced, and improved an average of 8.75 percentage points per year, placing it in the upper right quadrant of the chart.

<sup>17</sup> Schools are counted more than once if they have a combination of elementary, middle, and high school students. This reflects the SAR reporting categories, in which a school accountability rating is issued separately for each school level.
